Service definitions

Hardware Audit

Unpack all parts and verify correct as ordered.

Hardware Build

Installation of multiple required hardware components into Intel server. This includes RAM, HDD, SSD, NIC cards and FC cards.

Firmware Update

Apply latest vendor supplied firmware updates to all hardware components.

Hardware Test

Perform power on test. Resolve any hardware alerts or errors.

RAID Configuration

Configure internal HDDs, SSDs etc. into customer required RAID sets.

OS Install

Basic OS installation (Windows/Linux/VMware ESXi).

Update Drivers

Installation of vendor supplied drivers for hardware components.

Additional Options

- On-site installation
- Migration of existing workloads
- Installation and configuration of virtualisation management
- Hardware monitoring
- Ongoing support
- Installation and configuration of SAN storage systems
